

Recording of the week: an encounter with an orangutan

This week's selection comes from Cheryl Tipp, Curator of Wildlife and Environmental Sounds.

Coming face to face with a wild orangutan is something most nature lovers can only dream about. In this evocative interview extract, wildlife sound recordist [John Paterson](#) vividly describes a chance encounter with a curious female in Borneo's Danum Valley.

[An encounter with an Orangutan_John Paterson \(C1627_3\)](#)

Orangutan

illustration from *Brehms Animal Life* (courtesy of the Biodiversity Heritage Library)

These critically endangered primates can only be found in the rainforests of Borneo and Sumatra and are the subject of several conservation programmes whose work attempts to counter the effects of poaching, habitat destruction and the illegal pet trade.

More interviews with wildlife sound recordists, from scientists to hobbyists, can be found [here](#).

Recording of the week: surviving an oil rig disaster

This week's selection comes from Dr Rob Perks, Lead Curator Oral History.

In this moving testimony recorded for 'Lives in the Oil Industry' project, oral historian Hugo Manson talks to Bob Ballantyne (1942-2004), a survivor of the Piper Alpha North Sea oil rig disaster in 1988 which killed 167 people.

[Bob Ballantyne – surviving the Piper Alpha oil rig disaster](#)

Piper Alpha Disaster Memorial (Elliott Simpson)

The [full interview](#) can be consulted at the British Library and is part of [Lives in the Oil Industry](#), a joint National Life Story Collection/Aberdeen University project, begun in 2000, to record the major changes which have occurred in the UK oil and gas industry in the twentieth century, focussing particularly on North Sea exploration and the impact of the industry on this country.

Finding television at the British Library

It's not always realised that the British Library has a substantial moving image collection – around 170,000 items. A great many of these are television programmes in digital form and instantly accessible for researchers in our Reading Rooms on any Library computer. All you have to do is find the record on our [Explore](#) catalogue, click on 'I Want This', and play. Because of rights issues, we cannot make our television holdings available online offsite, but onsite there is much to discover, of which below is a quick guide.

If you are in a British Library reading at one of our computer, choose your subject through Explore, pick Online: Reading Room only under Access Options, select Moving Images under material type, then at the next page click on I Want This. If an instant access copy is available it will say 'Play this (at British Library only)'

Television news

We have been recording television (and radio) news programmes since May 2010. Currently we record from 22 channels, adding around 50 hours per day. This includes all the main news programmes from the BBC, ITV, Channel and Sky News, plus selected programmes from CNN, Al Jazeera English, RT (Russia Today), France 24, China's CGTN and Nigeria's Channels 24. We make extra recordings of breaking news stories and major stories such as the Olympic and Paralympic Games, general elections and the EU referendum.

We aim to record the same programmes each day, so as well as the main news broadcasts we have good runs of series such as *HARDtalk* (BBC), *Daily Politics* (BBC), *Listening Post* (Al Jazeera), *Dispatches* (Channel 4), and *The Pledge* (Sky News). We also record satire shows such as *Have I Got News For You* (BBC) and *News Thing* (RT), and just now we're recording many extra programmes relating to the UK general election, including party election broadcasts, debates, speeches (given in full on BBC Parliament) and manifesto launches.

There are currently around 90,00 programmes available, all of them instantly accessible onsite. You can view the programmes within hours after broadcast on our Broadcast News service, available on any British Library terminal, or we upload new programmes to the catalogue at the end of each month.

Our onsite Broadcast News service provides instant access to tens of thousands of news programmes, and a growing number of non-news programmes as well (see the Other Television option, bottom right)

Other television

We have many other television programmes, mostly relating to sound and performance, which we have collected since the 1980s. From 2015 onwards these are all available digitally with instant onsite access. Currently we focus on what are our main moving image collecting areas: current affairs, performance and oral history. We also record programmes relating to other areas of curatorial interest, including wildlife, literary adaptations, and programmes that connect with major exhibitions that we have held (e.g. Magna Carta, Shakespeare).

Programmes you will find include *Later with Jools Holland*, *Storyville* documentaries, *Arena* and *Imagine* arts documentaries, *Gogglebox*, *Stacey Dooley Investigates*, broadcasts from festival such as Glastonbury and Reading, BBC4 music documentaries, *Springwatch*, *Upstart Crow*, *Wolf Hall*, docudramas such as *Damilola*, *Our Loved Boy*, all of BBC4's *Keith Richards' Lost Weekend*, awards ceremonies, the Proms, the Eurovision Song Contest, and much more. If you want to find them all in one place, visit the Broadcast News service, available on any British Library terminal, and click on the 'Other Television' option.

If you want to know more, or have any problems accessing our instant access videos, contact our [Listening & Viewing Service](#). They can also tell you about accessing our analogue TV collection (search for titles on the [SAMI](#) catalogue). We're also adding more and more archive video titles, which will need to be the subject of another post. But please remember, we can only offer access onsite, and on British Library terminals, not your own devices.

Recording of the week: Rock Island Line

This week's selection comes from Andy Linehan, Curator of Popular Music Recordings.

'Rock Island Line' was the hit single that sparked the [Skiffle](#) craze amongst British youth in the late 1950s. Skiffle was a pared-down mixture of jazz, blues and folk influences played on a mixture of tea-chest bass, washboard, guitars and banjo. Its simplicity made it accessible and appealing to the new generation of British teenagers. Lonnie Donegan's recording of '[Rock Island line](#)', an American folk song popularised by Leadbelly, inspired a host of British musicians including Cliff Richard, Jimmy Page, John Lennon and Paul McCartney to form their own groups and laid the foundation for decades of successful British Rock and Pop music.

[Rock Island Line_Lonnie Donegan and his Skiffle Group](#)

The Skiffle phenomenon is the subject of the forthcoming book '*Roots, Radicals and Rockers: how Skiffle changed the world*' by musician Billy Bragg.

An Ode to Early Record Catalogues

Thomas Henry is a collector of 78 rpm records based in Paris who has carried out extensive research on the history of sound recording through his blog [Ceints de Bakélite](#) and his interactive mapping project [Disquaires de Paris](#). With a background in history and sociology of music from Paris École des Hautes Études en Sciences Sociales, he is originally a vinyl collector who converted to shellac a decade ago after finding a bunch of mysterious Armenian 78 rpm records at Yerevan's flea market.

A member of [Paris Phono Museum](#), he also holds the Vice-Chair position of the International Association of Sound and Audiovisual Archives' (IASA) discography committee. One of the aims of the committee is to create a network of partners who will collaboratively create a bibliography of discographies including information about all current, out-of-print and in progress discographies published worldwide in print and electronic formats. Digital versions of discographies, including those which have thus far only been available in print, will also be made available through this bibliography. You can access it and add to it through [IASA's webpage](#).

A discography is a comprehensive and detailed compilation of musical recordings, particularly those of a particular performer or composer. It is also very common to find discographies dedicated to a music style or a label. Behind a discography, there is the will to provide more information about a body of sound recordings. Discographies are often created by a researcher, a collector or an institution. Some of them are printed and published, some of them are just excel sheets on the computer of private collectors, but all of them are created with the same purpose: increasing knowledge about an artist or an orchestra, a composer, a label, a music style, etc. Record catalogues, key sources for this type of research, are printed documents produced by record companies that can be used as valuable tools by discographers and music aficionados. They offer less information than a discography about the sound recordings, but are full of interesting elements that complement and enhance them.

For this blog post, Henry takes a closer look at some of the record catalogues made available online by the British Library and through their rich visual iconography, illustrates their use and history. Thomas Henry would like to thank Jonathan Ward and Suresh Chandvankar for their assistance in writing this piece.

An ode to early record catalogues

While listening to a fox-trot from the mid 1920's, a Beethoven sonata from the 1930's or a calypso from the early 50's, one might want to learn more about it. Of course some information will be available on the record's centre label but this information can be quite limited or not directly comprehensible. The name of a performer or an orchestra, title of a song, name and logo of a record company, short description ("fox-trot", "piano solo", "tenor with orchestra", "birds imitation" etc...), language and some

obscure figures and letters can still lead us to wonder – When was this recorded? Who is the singer? What did he/she look like? Was he/she famous? What were people listening to at the time? And how did they listen to their records?

Finding answers to all these questions might take time or even turn into a lifelong quest for some obsessive researchers. Such research can be somewhat akin to detective work and clues can be found browsing photograph, newspaper, poster or sheet music collections available in libraries. Another fascinating, often underrated but incredibly useful item in this research is the record catalogue. 175 record catalogues have been digitized and made available on the [British Library website](#). They are focussed on the British market and cover the "acoustic era" – from the late 19th century to the mid 1920's – before the microphone's invention. One might see these catalogues as just a simple listing of records, but they are actually much more than that and in this post, I'll try to show why.

New His Master's Voice Operatic Records,
1925

From the very beginning of the phonographic industry, all recording companies published catalogues listing their published output: wax cylinders and later on, records. In most cases, "general catalogues" were published every year and these were sometimes completed by "supplements", published on a monthly basis. In addition, some extra catalogues were also published for specific repertoires or special occasions. Created for a commercial use, these catalogues firstly give an overview of a record company's output at a given moment in time and illustrate how this output was categorised and marketed. Indications on the label's colours assigned to each musical style and its corresponding price range give us a clear picture of what it was like buying records in the past.

Zonophone Record Catalogue,
1913-14

The very first catalogues from the late 1890's rarely mention the name of performers and composers; potential buyers were more interested in the name of a popular melody or an opera. Their content gets more precise over time and later catalogues, provide much more detail.

Edison-Bell List of Records,
1898

These catalogues do not just consist of a monotone alphabetically ordered list of artists, they let us discover a very rich iconography – photographs, drawings, advertisements – complementary to the sounds themselves.

His Master's Voice New Records, September
1913

Beyond their aesthetic dimension, these graphic elements provide interesting information on the ways in which records and talking machines have been used over time. In addition, they often include technical tips on the best ways to play and store records, information that can be useful for people interested in the history of sound recordings and talking machines.

Complete Catalogue of Pathe
Standards 10 Inch Double Sided
Discs, 1911

These catalogues are also full of photographs and biographical elements about artists that can be hard to find anywhere else. They reflect consumers' tastes of the time, showing what the hits and who the big stars of the early 20th century were. This gives us some clues about the music our ancestors were listening to. No talking machine nor record collection from that time has survived in my family, so I can only speculate: were my great-grandparents fans of the French soprano Emma Calvé or the baritone Maurice Renaud?

Catalogue of "Red Label" Gramophone
Records, February 1904

Or were they listening to marches by La Garde Républicaine and comic monologues by Parisian "Café-Concert" artists? Or were they actually lovers of rare or upbeat – yet popular – repertoires, such as animal imitations, whistling or hunting horn recordings?

New Gramophone Records, August 1910

At a time where phonographs and gramophones were still considered by many as amusing curiosities rather than a way to enjoy "serious" music, convincing famous artists to make recordings was also a way for record companies to legitimize the talking machine. From very early on, The Gramophone Company understood that and some of its older catalogues feature pages where some popular singers express their admiration for the Gramophone and its capacity to faithfully reproduce their voice.

His Master's Voice Celebrity Records, 1915

In the same vein, record companies also used their catalogues to promote some of their "sensational" or unusual recordings and demonstrate the superiority of their products. Lacking Lolcats at the time, lambs and dogs were preferred to create a buzz.

His Master's Voice New Records,
September 1913

As an object, each of these catalogues has its own history. If you look at

them carefully, you'll see that they have many stories to tell about their former owners and the period during which they were published. They might include personal hand-written notes by their former owners or references to the historical and political background, as illustrated by the following reference to the Russo-Japanese War.

Catalogue of Twelve-inch Gramophone Monarch Records,
March 1904

□ Early recordings made in some regions of the world are less documented than those made in Western countries. In some cases, there is no longer an existing archive allowing us to discover more about an artist and the context in which he or she was recorded. For these types of records, the work of discographers becomes absolutely essential. Based on a systematic inventorisation and analysis of cylinder and record details – performers, title, language, label, genre, matrix and catalogue numbers – discographical research provides valuable elements to find out the date and the result of a recording session. Record catalogues are a key resource for discographers, as they feature dating and background information. Browsing these catalogues is often the first step in discographical research, even though some of them are very rare – in some cases much rarer than records themselves! The opposite also holds true: records listed in some catalogues might never turn up and their presence in a catalogue remains the only evidence that they ever existed.

As a collector of 78 rpm records “from around the world” – some might call them “world music” or “ethnic” records – I cannot conclude this post without mentioning some beautiful examples from this area taken from the British Library's catalogue collection. They let us discover some very early Indian, Persian, Arabic and Russian recordings made in 1899 by the Gramophone Company in London.

Gramophone Record Catalogue, 1899

As part of the British Library's [Endangered Archive Program](#), a large collection of 1,408 Indian songs recorded on 78 rpm records were digitized and made accessible online in 2016. This unique material, focussed on the Odeon and Young India labels was sourced from private Indian collectors Suresh Chandvankar, Sunny Matthew and Narayan Mulan. Some very rare catalogues were also digitized, allowing us to enjoy their gorgeous illustrations and fascinating photographs while listening to some of the fabulous recordings available, such as [this solo of Sundari](#), a double reed instrument, performed by Vithal More.
