

News story: Seven british Army soldiers killed during World War 1 are honoured as they are laid to rest

Captain (Capt) Henry John Innes-Walker (Copyright Innes-Walker family) All rights reserved

Captain Henry John Innes Walker, a New Zealand national serving with the british army, has finally been laid to rest alongside 6 unknown soldiers after they were killed during World War 1. Known to his family as Jack, Capt Walker enlisted into the Royal Warwickshire Regiment as did 1 of the unknown soldiers. The 5 remaining were buried as unknown soldiers of unknown regiments, all at the Commonwealth War Graves Commission New Irish Farm Cemetery in Ieper, Belgium.

The service, organised by the MOD's Joint Casualty and Compassionate Centre, part of Defence Business Services, was held on Wednesday 18 April 2018 and was conducted by the Reverend Stuart Richards CF, Chaplain to the 1st Battalion The Royal Regiment of Fusiliers.

Louise Dorr, JCCC said:

It's a great honour to be here today to lay to rest these 7 brave men who paid the ultimate price in the service of King and country. Although saddened that the 6 will remain unknown, I am delighted that we managed to return Captain Walker's name to him and especially thrilled that his great nephews have travelled so far to be with us today.

After war was declared in 1914, the Royal Warwickshire Regiment left for the front and Capt Walker saw active service on the Belgian frontier as part of the 10th Brigade of the 4th Infantry Division. Capt Walker was aged 25 when he was killed on 25 April 1915 during the Second Battle of Ypres, which resulted in his regiment losing nearly 500 men. It is likely that all 7 died during the Second Battle of Ypres (April-May 1915).

Padre Stuart Richards delivers the service for Captain Walker and the six unknown soldiers, Crown Copyright, All rights reserved

Reverend Stuart Richards CF said:

It is a privilege to be part of this on-going act of national

remembrance, to preserve and dedicate anew these memorials for future generations. Captain Walker travelled from the other side of the world to serve his country, and was never to see his home again. Today, a century on, his family have made that same long journey in his honour, and to remember those he led and died with.

During a planned archaeological dig on the western side of the village of St Julien in April 2016, human remains and artefacts dating from World War 1 were discovered. Capt Walker and the 6 unknown soldiers were found amongst a total of 38 casualties from various nationalities.

Royal Warwickshire cap amongst poppy wreath, Crown Copyright, All rights reserved

Capt Walker was found with a coin holder, binocular components and leather casing bearing the initials 'HJIW', plus a Royal Warwickshire Regiment cap badge and shoulder title.

Family members who paid their respects to Capt Walker included his great nephews, Allan and Alistair Innes-Walker, who travelled from New Zealand and Australia respectively. Also present was Greg Andrews, New Zealand Ambassador to Belgium and France, and Colonel James Phillips, the Defence Attaché from the British Embassy in The Hague. Current members of the 1st Battalion The Royal Regiment of Fusiliers paid their own tribute by providing the bearer party.

Allan Innes-Walker, great nephew of Capt Walker said:

According to his men, Jack's last words were 'Come on lads' as he raised his revolver and led his company towards German lines and heavy fire. His discovery and burial are a once-in-a-lifetime opportunity for my children to connect to a family member and a devastating history – an unexpected and inspiring legacy.

Alistair Innes-Walker, great nephew of Capt Walker said:

My son is named after Great Uncle Jack. At school we sat beneath his memorial stained glass window – an ever-present reminder of a sad but proud history. To have the chance to pay our respects and meet those involved from the MOD Casualty Centre will mean so much to Jack's now very extended family.

Michael Innes-Walker, the nephew of Capt Walker was unable to make the journey. Michael said:

From my earliest years my father told me stories of Uncle Jack – the schoolboy scholar and sportsman. He always wanted to be a soldier and joined the Royal Warwickshire Regiment, got posted to India and became a close friend of ‘Monty’ (later General Montgomery) before transferring to France. My family never knew what happened to him other than he was killed in action, and now we will be honouring him as he so justly deserves.

Mel Donnelly, CWGC said:

Captain Walker was far from his New Zealand home, when he was killed in action in April 1915. He was a remarkable man, sent to serve with the British Army on behalf of his country, an outstanding athlete and a decorated officer. Today we have been able to lay him and his comrades to rest at the Commonwealth War Graves Commission’s New Irish Farm Cemetery, alongside the men they fought and died with. We remember his sacrifice and that of all those who served and will care for their graves and their memory with dedication, forever.

Colonel James Phillips, British Defence Attaché said:

It is a real honour representing the British Embassy at the burial of Captain Walker and six unknown soldiers. These were men who fought in such horrific conditions that it was impossible to identify them. They will never be forgotten – today has shown that. The end of the first World War may have been 100 years ago this year, but our memory of these men will live on. Their fight was instrumental for our freedom. It is important that these soldiers have been given a final resting place, with the full honours they deserve. They have made the ultimate sacrifice for us.

One new headstone bearing Capt Walker’s name and six inscribed with ‘Known unto God’ have been provided by the CWGC, who will now care for their final resting place in perpetuity.

Press release: FCO wins Silver award from Mind for commitment to staff wellbeing

The FCO was one of 74 organisations to take part in Mind's second annual [Workplace Wellbeing Index](#), receiving a Silver accreditation at the awards ceremony last night.

The FCO was recognised for its continuing work and development of wellbeing practices, both in the UK and overseas.

Highlights over the past year include developing a Wellbeing Strategy, first-hand articles from senior leaders, and expanding the network of mental health first aiders.

Mind's Workplace Wellbeing Index is a benchmark of best policy and practice, celebrating the good work employers are doing to promote and support positive mental health, and providing key recommendations on the specific areas where there is room to improve.

Sir Simon McDonald, FCO Permanent Under-Secretary, said:

FCO staff do phenomenal work around the world, often in difficult circumstances: looking after their health and wellbeing is a priority. I am proud that our commitment to wellbeing has been recognised. I hope the work we are doing will mean that in the future we can aspire to a Gold award.

Emma Mamo, Head of Workplace Wellbeing at Mind, said:

Employers are increasingly acknowledging the importance of tackling stress and supporting the mental wellbeing of the entire workforce, including employees that might be struggling with their mental health. We're delighted to recognise and celebrate employers making mental health a priority for their organisation through our Workplace Wellbeing Index.

This year, we've been overwhelmed to see so much good practice right across the board, from each and every one of the 74 diverse employers to take part. The Awards event provided an opportunity to recognise those forward-thinking employers who are at the cutting edge when it comes to investing in their staff wellbeing, and in turn getting the best outcomes for their business.

News story: UK and India extend health partnership to deal with global health risks

Prime Minister Theresa May, and Indian Prime Minister Narendra Modi, today agreed to step up the health partnership between the UK and India. The UK-India Statement of Intent on Partnership for Cooperation in Third Countries will be extended, with the aim of improving the health and wealth of both countries.

Health research will be expanded in the areas of:

- anti-microbial resistance
- low cost health products
- high yield crops

The UK government will invest £1 million in an Artificial Intelligence (AI) project that will support India's national health programmes. UK-based companies with innovative healthcare technologies will be able to participate in this project, which will generate around £50 million of business for the UK's digital health industry.

There are also plans to develop up to 5,000 diagnostic centres in India using NHS expertise, equipment and suppliers.

Eleven new 'medicities' are already being developed in India, with related:

- hospitals
- nursing and medical colleges
- research and innovation centres

The medicities programme is run by the Indo UK Institute of Health (IUIH) in partnership with leading UK hospitals, the first of which is King's College Hospital.

Secretary of State for Health and Social Care Jeremy Hunt said:

I am proud that our NHS will be used as an example of gold standard healthcare in India – it is only right that our world-leading knowledge and expertise is shared across the globe.

Global disease, infection and antimicrobial resistance are real threats to us at home and abroad – this partnership will enable us to tackle 21st century threats together.

Health Minister Steve Brine said:

Health expertise and research is a global issue – if we act alone in tackling virulent diseases and long term health threats, we will fail.

This partnership between Britain and India represents a firm trajectory for healthcare into the modern world. Through new research, shared expertise and attention to ground-breaking technologies, both nations can continue to lead the world in health and care.

[News story: UK and India research partnership reaches £400 million](#)

- UK and India to expand their exceptional research relationship to work together to address global challenges including agriculture, health, environment and climate change.
- Science Minister Sam Gyimah also today confirms the next step towards a UK-India joint advanced manufacturing centre, as part of a new UK-India Technology Partnership.
- Announcement comes as part of the Indian Prime Minister Modi's visit to the UK today.

Science Minister, Sam Gyimah, has today (Wednesday 18 April) announced, as part of Indian Prime Minister Modi's visit to the UK, that the UK will continue to grow its already strong research partnership with India with tech-focused investments that focus on issues of global importance including agriculture, clean energy, global health and the environment.

Britain is established as India's second largest research partner, with joint investment between both countries in science and innovation having grown from almost nothing in 2008 to around £400 million by 2021, including over 200 individual projects, involving 175 different UK and Indian research institutions and more than 100 industry partners, funded in the last decade.

The expanded partnership will help deliver on the UK's ambition to be the world's most innovative nation through its Industrial Strategy, while ensuring UK and Indian researchers, innovators and institutions are combining knowledge and expertise to feed the world's hungry, protect our environment, save lives and drive economic inclusion. For example, the UK and India are working to deliver a second wave of new joint projects under the Global Research Programme on Health, with UK and Indian researchers working trilaterally with partners in low-income countries to look at chronic and

infectious diseases facing women and their unborn children.

Science Minister Sam Gyimah said:

By combining our best minds, our brightest innovators and our most forward-thinking institutions we will strengthen the living and learning bridge between our countries and achieve more together than we could alone.

India is the world's fastest growing major research power and the UK is one of the world's top performing research nations. Together we will continue to build our unique relationship, ensuring that it is a partnership that brings benefits to countries across the world through world-class research that address shared goals.

Included in the package are research and innovation funding awards made by UKRI under the following Newton-Bhabha Programmes:

- Pulses and Oilseeds – under a £7m joint programme projected to increase the productivity, resilience, sustainability and quality of pulses and oilseeds grown for food or feed
- Urban Transformations – under a £3.5m programme to address issues around rapid urbanisation including issues that are predicted to arise in developing areas like urban planning, governance and management
- Bio-Technology for Industrial Waste – a £16m programme focused on reducing industrial waste and pollution, and improving the recoverable value from waste using biotechnology
- A £10m cross council Anti-Microbial Resistance programme, harnessing every discipline to address this challenge

Sir Mark Walport, Chief Executive UK Research and Innovation said:

The creation of UK Research and Innovation comes at an exciting time for both the UK and India. As the UK aims to raise total research and development investments to address global development challenges and new strategic priorities, so is India boosting investment in research and innovation, presenting a huge opportunity for collaboration in business-led innovation and high-quality research that changes lives.

The Met Office and the Indian Ministry of Earth Sciences (MOES) have signed a statement of intent to establish a Weather and Climate Science for Service Partnership for India (WCSSP India), supported by the Newton-Bhabha Fund. WCSSP India will facilitate joint scientific research to improve natural hazard forecasts, particularly for high-impact weather events.

As part of the UK-India Technology Partnership being agreed today by the PM and Indian Prime Minister Modi, the UK and India have also announced a shared ambition to strengthen the two countries manufacturing relationship.

The Technology Partnership will build on existing cooperation with the UK and India set to complete a joint study as part of the Partnership the first step towards the potential establishment of an Advanced Manufacturing Centre. Such a centre would support each nation's Industrial Strategy and in turn drive growth and jobs in both countries.

India is already the second most populous country in the world and is projected to be the third largest economy by 2030. India's rapid economic growth is already having a significant impact globally. India's official development finance, private sector-led trade and investment flows, political influence and thought leadership are all growing.

Notes to Editors

1. The UK ended traditional aid to India in 2015 and replaced it with a new partnership which will deliver clear benefits for both our countries: creating new investment and innovation opportunities and boosting trade links. Much of this is done through development capital investment that will generate a financial return for the British taxpayer.
2. Our global research partnership with India complements this; India is a rising global power with a rapidly growing economy and increasing engagement in countries that are priorities for the UK and on global issues that matter to the UK, such as counter terrorism, climate change and health security. ODA spending to support the global development partnership is not aid to India.

[Press release: North East man fined for illegal fishing](#)

A Newcastle man has been fined for fishing using an illegal set line which can be damaging to fish stocks following an investigation by the Environment Agency.

Lin Zhi Jin, 42, of Belgrave Parade, Newcastle, appeared at Newcastle Magistrates' Court on Friday 13 April where he pleaded guilty to fishing using the illegal equipment. He was ordered to pay a total of £400 in fines and costs.

A set line, which is a fixed line above water with baited hooks attached to it, can result in severe injury to fish and is indiscriminate in nature, making it a damaging method of capture.

It happened in the early hours of 26 July last year when Environment Agency Fisheries Enforcement Officers were carrying out patrols of the River Tyne in the Wylam area when they saw the defendant on the river bank. He was spoken to and produced a valid rod licence, which permits fishing using a rod and line.

While checks were being carried out a search of the immediate area revealed a set line tied to a post on the river bank and leading into the river. It was hauled in and found to have four baited hooks attached to it.

Potential to damage fish populations

Kevin Summerson, Fisheries Technical Specialist at the Environment Agency, said:

The River Tyne is an important river for migratory fish and this spot in Wylam is popular for keen anglers. This type of equipment is illegal to use in rivers in England for a reason – they have the potential to cause significant damage to fish populations.

We take all kinds of illegal fishing very seriously, whether it's those fishing without a licence or licensed anglers using illegal equipment. It's not fair on other anglers who make sure they fish within the law, and also endangers the future of the sport by damaging the sustainability of fish stocks.

The Environment Agency's work is intelligence-led and they work closely with partners to target known hot spots and where illegal fishing is reported.

Important for people to report illegal fishing

During March the Environment Agency prosecuted nine anglers at courts in the North East for unlicensed fishing and associated offences, resulting in fines and costs totalling almost £2,000.

This included three men from Morpeth prosecuted for unlicensed fishing and byelaw offences that took place on 29 September 2017 on the River Wansbeck. Fisheries Enforcement Officers were supported by Northumbria Police when they made the arrests.

Ashley Lawson, 29, of Shields Road, Dwayne Dodds, 33, of Rutherford Place, and Martin Shaun Pringle, 28, of Kitty Brewster Road, all had their cases

proved in absence at South East Northumberland Magistrates' Court and received fines and costs totalling more than £1,100.

Kevin added:

As well as unlicensed fishing some of these offences included obstruction, failing to state correct names or addresses, using illegal baits, close season offences and theft. It's really important people report information about suspected illegal fishing to us so we can investigate.

The Environment Agency urges anyone to report illegal fishing by calling 0800 80 70 60 and are always looking to gather good intelligence.

With the support of the Angling Trust Voluntary Bailiffs – who keep watch on their local rivers and report suspicious activity to the Environment Agency and when appropriate, the police – this network has increased.

The Environment Agency is currently working with the Angling Trust as part of Operation Clampdown – the annual blitz on illegal coarse fishing during the close season, which started on 15 March and runs until 15 June.

All income from rod licence sales is used to fund Environment Agency work to protect and improve fish stocks and fisheries, including improving habitats for fish and facilities for anglers, tackling illegal fishing and working with partners to encourage people to give fishing a go.
