

## [News story: MMO welcomes first NERC Knowledge Exchange Fellows](#)

The Marine Management Organisation (MMO) has welcomed its first Natural Environmental Research Council (NERC) Fellows to support its work in improving access to marine science.

Dr Jacqui Tweddle from the University of Aberdeen and Dr Katherine Yates from the University of Salford have started in their new roles of Knowledge Exchange Fellows, helping the MMO to deliver key elements of its Evidence Strategy.

Dr Tweddle and Dr Yates' three year fellowships will focus on the use of science in decision making and marine management, encouraging greater knowledge exchange around marine research.

The two fellowships which are funded by NERC, will:

- Support the review of the use of science in the MMO's decision making processes
- encourage greater collaboration between the MMO and academic and research communities
- fill gaps in marine evidence by influencing and improving access to external marine research

As part of their fellowship Dr Tweddle and Dr Yates will also identify and promote the vast amounts of marine data and evidence generated by scientific researchers to the MMO enabling the MMO to provide effective, efficient, targeted marine management based on the most up to date knowledge.

This work is an important part of delivering Part 2 of the [MMO's Evidence Strategy](#), published August 2016. The Strategy sets out how knowledge exchange, partnership and influencing research will be used to deliver the MMO's future evidence requirements.

Dr Tweddle said: "I'm excited to be working with the MMO, and grateful to NERC for the opportunity. Understanding more clearly what the MMO needs, and how the research community can support that, is a priority for me. I want to help the MMO access and use the best scientific evidence and expertise available. Facilitating new contacts between researchers and the MMO will both help the MMO, but also provide researchers with opportunities to have their work make the biggest impact it can in supporting how we manage our marine activities."

Dr Katherine Yates added: "Marine management is incredibly complicated and it's essential that management decisions are based on robust, up-to-date evidence. Our roles will be to help with evidence provision, through both personal contributions and by facilitate partnerships between the academic community and the MMO. It's an exciting opportunity and I am grateful to be

part of it.”

Adam Cook, MMO’s Head of Evidence welcomed the two knowledge exchange fellows:

“We are delighted to welcome Jacqui and Katherine to the MMO. The scale and complexities of our seas means there is still much to learn about their ecosystems and our impact on them. Access to high quality evidence is critical to delivering effective and sustainable marine management and their work will be an invaluable part of improving access to this information.”

Notes

- [Dr Jacqui Tweddle](#) is a research fellow at the University of Aberdeen, and is an oceanographer with expertise in marine spatial planning.
- [Dr Katherine Yates](#) is a lecturer at University of Salford specialising in marine conservation planning and spatial management.
- Both fellowships are funded by the Natural Environment Research Council. NERC Knowledge Exchange Fellows focus on accelerating and amplifying impact of NERC science. They do this through a number of different mechanisms, from NERC-funded research to working with business, non-governmental organisations (NGOs) or, as in this case, government bodies.
- This new partnerships between the MMO and NERC is an important part of delivering the MMO’s Evidence Strategy, improving access to the latest scientific research and providing funding for a new Knowledge Exchange Fellowship.
- NERC is the UK’s main agency for funding and managing research, training and knowledge exchange in the environmental sciences. Their work covers the full range of atmospheric, Earth, biological, terrestrial and aquatic science, from the deep oceans to the upper atmosphere and from the poles to the equator. They co-ordinate some of the world’s most exciting research projects, tackling major issues such as climate change, environmental influences on human health, the genetic make-up of life on Earth, and much more. NERC is a non-departmental public body. They receive around £330m of annual funding from the Department for Business, Energy and Industrial Strategy (BEIS).

## **Press release: Government Ministers visiting Wales as part of Industrial Strategy engagement programme**

- Ministers visiting sites across Wales to explain how plans for a modern Industrial Strategy will benefit Wales.
- Business Secretary Greg Clark to be joined by Wales Secretary Alun

Cairns at General Electric (GE) Aviation to tour production line and meet staff.

- Engagement will be followed by an evening reception with leading Welsh businesses and organisations in Cardiff.

The Government's engagement programme for its Industrial Strategy continues today, with Ministers set to meet with universities, companies, and workers in Wales to hear their views on how to get the economy firing all cylinders.

Business Secretary Greg Clark and Wales Secretary Alun Cairns will visit General Electric (GE) Aviation in Cardiff to meet with production staff and management, before touring the plant to see the world-class services GE offers to airlines around the world.

Greg Clark, Alun Cairns and Business Ministers will then host an evening reception at Tramshed Tech in Cardiff with Welsh businesses, trade groups and local leaders, discussing the views of the Welsh business community on the priorities for a modern Industrial Strategy.

### **Business and Energy Secretary Greg Clark said:**

We recognise no two places in the UK are the same with each place having its own unique identity and strengths.

Through our modern Industrial Strategy we plan to build on these strengths in fields such as aerospace, technology and life sciences, to make Wales one of the most competitive areas in the UK to start and grow a business.

We launched our strategy as a Green Paper because we want this to be a conversation with businesses and employees. Today my ministerial team and I are visiting Wales to discuss how the Government can work with business and academia to deliver a high-skill economy, prepared for the future.

### **Secretary of State for Wales Alun Cairns said:**

The UK Government's modern industrial strategy is a plan for everyone. Wales has a strong competitive economy and by pulling together we can build on our strength to grow key sectors and business in Wales.

We need to ensure people throughout Wales benefit from the creation of a highly skilled and strong workforce; this is what the industrial strategy sets out to do.

Universities and Science Minister Jo Johnson is visiting world-leading engineering and scientific technology company, Renishaw Plc, while Lord Prior of Brampton is visiting a Tata Steel plant in Shotton and the military

aerospace facility, Raytheon.

Climate Change and Industry Minister Nick Hurd is going to the Liberty Steel plant in Newport and sustainable cement manufacturer Cenin Cement in Bridgend.

Small Business and Consumer Minister Margot James will be visiting a leading microbrewery, Tiny Rebels Brewery, to find out more about its recent export successes, before visiting the largest animation production company in Wales, Cloth Cat Animation. Margot will then be part of a creative industries roundtable on the Industrial Strategy, with representatives from the creative industry in Wales.

In its Green Paper, Building our Industrial Strategy, the Government has outlined ten key pillars of focus to be discussed as part of a 12 week consultation period, inviting contributions from industries, businesses, local groups and workers across Wales.

With a clear ambition of creating an economy that works for everyone, the Green Paper contains a number of proposed announcements set to benefit the Welsh regions such as:

- The Industrial Strategy Challenge Fund and foundation of UKRI, creating new opportunities for Wales' world class universities to bid for UK Government funding.
- Recognising the excellence in research and innovation that exists across the UK, and investing an additional £4.7 billion by 2020-21.
- Investing in digital infrastructure, which has for too long been a barrier to economic growth across Wales.
- Finding a sustainable way to support energy intensive industries such as steel with energy costs.

The Government has issued an open invitation to industries, businesses and local groups across Wales to visit the GOV.UK website and help set the priorities for a modern Industrial Strategy. The consultation period runs for 12 weeks after which the Government will consider responses before publishing a White Paper later in the year.

## **Notes to Editors**

### **Industrial Strategy pillars**

The Green Paper seeks views from Wales on how the Government can refine its vision to help the UK economy meet future challenges and opportunities. The 10 pillars which the Green Paper seeks feedback on are:

- Investing in science, research and innovation – we must become a more innovative economy and do more to commercialise our world-leading science base to drive growth across the UK.
- Developing skills – we must help people and businesses to thrive by: ensuring everyone has the basic skills needed in a modern economy; building a new system of technical education to benefit the half of

young people who do not go to university; boosting STEM (science, technology, engineering and maths) skills, digital skills and numeracy; and raising skill levels in lagging areas.

- Upgrading infrastructure – we must upgrade our standards of performance on digital, energy, transport, water and flood defence infrastructure, and better align central government infrastructure investment with local growth priorities.
- Supporting businesses to start and grow – we must ensure that businesses across the UK can access the finance and management skills they need to grow; and we must create the right conditions for companies to invest for the long term.
- Improving procurement – we must use strategic government procurement to drive innovation and enable the development of UK supply chains.
- Encouraging trade and inward investment – government policy can help boost productivity and growth across our economy, including by increasing competition and helping to bring new ways of doing things to the UK.
- Delivering affordable energy and clean growth – we need to keep costs down for businesses, and secure the economic benefits of the transition to a low carbon economy.
- Cultivating world-leading sectors – we must build on our areas of competitive advantage, and help new sectors to flourish, in many cases challenging existing institutions and incumbents.
- Driving growth across the whole country – we will create a framework to build on the particular strengths of different places and address factors that hold places back – whether it is investing in key infrastructure projects to encourage growth, increasing skill levels, or backing local innovation strengths.
- Creating the right institutions to bring together sectors and places – we will consider the best structures to support people, industries and places. In some places and sectors there may be missing institutions which we could create, or existing ones we could strengthen, be they local civic or educational institutions, trade associations or financial networks.

## **Department for Business, Energy and Industrial Strategy**

The Department for Business, Energy and Industrial Strategy brings together the responsibilities for business, industrial strategy, science, innovation, energy, and climate change. The Department is responsible for developing and delivering the Government's vision for an ambitious industrial strategy, and continuing to ensure that the UK remains at the leading edge of science, research and innovation. The Department leads the Government's relationship with business, and is responsible for improving corporate governance and securing better outcomes for consumers. We also make sure that the UK has secure energy supplies that are reliable, affordable and clean and take action to tackle climate change, working in partnership with the business community.

## Beijing to receive 900 cubic meters of water from Yangtze River in 2017

Beijing expects to receive 911 million cubic meters of water from the Yangtze River between Nov. 2016 and Oct. 2017, local authorities said on Tuesday.

The south-to-north water diversion project has already pumped 260 million cubic meters of water into Beijing since last November, according to the capital's office for the project.

Since the project began pumping water in December 2014. Beijing has received more than 2 billion cubic meters of water from the Yangtze, and 1.6 billion cubic meters of water from nearby Hebei Province, according to Sun Guosheng, head of the office.

More than 11 million residents, or about half of Beijing's population, have directly benefitted.

Recent data showed the water table in Beijing had risen 0.42 meters from a year ago, thanks to a daily water flow of 3.4 million cubic meters from the project.

The city will construct more facilities including pipelines and reservoirs, according to Sun.

The project was conceived by Mao Zedong in 1952. The State Council approved the project in December 2002 after nearly half a century of debate.

## Jeremy Corbyn remarks on the death of Martin McGuinness

**Jeremy Corbyn MP, Leader of the Labour Party**, commenting on the death of Martin McGuinness, said:

"I was very sad to hear of the death of Martin McGuinness this morning, and I would like to send my thoughts and condolences to his wife Bernie and his family.

"Martin McGuinness played an immeasurable role in bringing about peace in Ireland, after years as a key protagonist in the tragedy of the conflict.

“Martin played an absolutely crucial role in bringing about the Good Friday Agreement and a peace process which, despite difficulties, remains an example throughout the world of what can be achieved when the will is there.

“As we reflect on his role, the past twenty years have shown us that if there is leadership and the will on all sides, we can achieve change.”
