

Minister Muir visits storm hit forest

Agriculture, Environment and Rural Affairs Minister Andrew Muir has visited Drum Manor Forest Park, which suffered significant damage following Storms Darragh, Eowyn and Herminia, to see the clean up efforts.

How I became a Trainee Software Engineer in just 4 steps!

Before becoming a Trainee Software Engineer, I had worked in various enjoyable roles within DVLA. However, digital had always been my passion and it was a discipline I really wanted to pursue.

So in 2023, with a view to beginning a new career, I joined DVLA's digital advocacy group, Digital Voices, which promotes digital careers and opportunities within DVLA. This provided the initial spark to help me take the first step to becoming a Trainee Software Engineer.

In this blog, I want to share with you the 4 steps that helped me get my dream digital role!

1. Becoming a digital advocate

My first step was to find out how to get involved in all things digital at DVLA. Joining Digital Voices gave me the chance to meet new people and build my confidence speaking to senior colleagues. I really appreciate the inclusivity of the community; the group is open and welcoming to anyone, regardless of their role within the agency.

It's an amazing opportunity to network with colleagues who you might not normally work with. I still try to attend as many activities as possible to learn more about digital careers and skills. Now that I've started my digital career, I hope to continue advocating for others who want to follow a similar path.

2. Finding a mentor

Through the new connections I made, I learned about DVLA's mentorship programme. I joined the programme and was paired with an Agile Delivery Manager in the agency's Information and Technology Services directorate. My mentor gave me advice on digital careers and shared relevant skills like Agile methodologies, project management and service delivery. By observing her work, her squad, and seeking her advice, I gained a deeper understanding of the skills needed to succeed in a digital career.

Her mentorship helped to build my confidence and navigate challenges with support and practical advice. For example, my mentor worked with me on

improving my interview skills, particularly in tailoring my responses to specific job requirements.

I aspire to become a mentor myself and help others navigate their career paths. Mentorship has been crucial to my development, and I'd love to give back in the same way.

3. Attending ethical hacking workshops

Last year, I joined an 8-week ethical hacking programme, which taught me how to find weaknesses in IT systems and protect them from threats. The workshops were a fantastic experience. They not only equipped me with new technical skills but also provided me with a deeper understanding of the importance of ethical hacking.

Hearing directly from the ethical hacking team was a highlight. Their passion for protecting systems was inspiring, and I left with a greater appreciation for how ethical hacking supports organisational security.

My positive experience inspired me to apply for the Software Engineer Apprenticeship, a 2-year programme focusing on Microsoft Dynamics, a suite of cloud-based business applications that we use at DVLA.

4. Applying for the Software Engineer Apprenticeship

I took the plunge and applied for the Software Engineer Apprenticeship in October 2024. The programme offers staff with an interest in software engineering a chance to develop the skills they need to become a Software Engineer. It was a proud moment when I was told that my application was successful and I could start my role as Trainee Software Engineer, learning skills on the job.

The first few weeks of the programme were a whirlwind! At first, I felt self-doubt as the only woman in my group, but I soon gained confidence. It was exciting to meet so many talented developers. I've already successfully passed the Power Platform Fundamentals exam and I'm now focused on preparing for the next certification. My goal is to apply my knowledge to practical projects which will help improve the user experience of DVLA systems and services.

As I reflect on my career journey so far, every experience has helped me grow. The challenges I've faced have made me more resilient, and the successes I've achieved have boosted my confidence. I'm excited to continue my career in digital and encourage others to take the first step towards theirs.

Start your digital career!

If you're thinking about [starting a career in digital](#) at DVLA, go for it! There are lots of opportunities for growth and development and you'll be

fully supported in your role.

If you're considering a career in digital, make sure you:

- stay curious and explore new technologies
- build relationships across teams and seek mentorship
- volunteer for projects and show enthusiasm for your work
- take advantage of training and development opportunities
- see setbacks as learning opportunities

Brexit anniversary sparks call for much closer relationship with EU

On the fifth anniversary of the UK's exit from the European Union, Green MP Ellie Chowns said:

"These five years have seen the economic, social and political costs of leaving the European Union become ever clearer.

"Far from 'taking back control', we have all lost out.

"Young people have been deprived of the chance to easily study and work in the European Union, while small businesses have found it increasingly difficult to export, and the UK is increasingly isolated on the international stage.

"No wonder, the proportion of the public believing Brexit to have been the right decision is at its lowest since 2020. (1)

"The Green Party is very clear that people and planet would benefit from much closer relationships between our country and the European Union.

"We will continue to press the Labour government to be braver and bolder in overcoming the negative impacts of Brexit.

"Full membership of the EU remains the best option for the UK, and we are in favour of pursuing a policy to re-join as soon as the political will is present.

"Of course, that means building the widespread public support we need before a decision to rejoin is made.

“There are win-win first steps that the government should be taking today. For instance, working with the EU on a youth mobility scheme that opens up the European Union to our youngsters.

“We should be working with the EU to tackle the twin crises of climate breakdown and biodiversity loss in the face of US President Donald Trump’s disastrous decision to pull the US out of the Paris climate agreement.

“We should also rejoin the Customs Union to begin to overcome the obstacles that small businesses have faced in trading with our closest partners since Brexit.

“While joining the Single Market would provide benefits in terms of free movement of people, goods, services and capital, membership of the Single Market without membership of the EU would not be an ideal long-term solution because the UK would not be a full partner in decision making processes.

“We’ve learned from the divisiveness of Brexit that binary choices push people apart rather than bring people together.

“So, we are proposing the use of citizens’ assemblies to support the wider public to make well-informed decisions about complicated political issues such as our future membership of the EU.”

Mark Ormiston, a sixth generation managing director of Ormiston Wire that manufactures a high quality products used in suspending lights, art installations, yacht rigging and surgical procedures, said Brexit is making it ever harder to get its components into final products manufactured abroad.

Mark Ormiston “We supply components not a final product so if the end product moves offshore, we have to try and supply that export market. With Brexit small exporters are being devastated and we must work very hard to persuade companies to use our quality and expertise.”
